

AUS-TAG: Issues from GPO

Gary Corlett

Users – who are they?

- GHRSSST has many users
- We need to know who they are
- How do we do this?
- Can we data mine more information?
- Need to know how many
 - Users
 - Power users
 - Small users
 - New users
 - One off users
 - Repeat users
- Then for each
 - Which products
 - How many products
 - Spatial coverage
 - Temporal coverage
 - What accuracy?
- Etc.
- Do RDACs have information?

User symposium and questionnaire

- Do we want to organise another user symposium
 - When, where, who pays?
- Do we want to organise sessions at major conferences?
- Is there any benefit to creating a user questionnaire?

Growth of GHRSSST

- To support growth of GHRSSST into new countries we can
 - Hold a science team meeting
 - Hold a GHRSSST local workshop
- The GPO favours the latter approach as ST meetings have specific requirements that do not ingratiate to expanding our user base
 - But who pays?

Discussion

- How do we generate more valuable user statistics from download metrics?
- Do we need a user symposium and questionnaire?
- Would local GHRSSST SST workshops help with growth into new countries?
- Who has read the URD?
